Hi Patti Kay,

Folks have researched already and determined it can be analyzed as a VOA. I've been trying to pay attention to phone but still missed you.

Cindy

4-methylcyclohexane methanol is the contaminant impacting WV American.

Didn't know if you could reach the lab folks at American Water who may be POCs via the lab response network to learn particulars on method, need etc. It is our understanding that DuPont developed method and is training folks at WVDHHR lab to also run.
